

AXON' CABLE recognised by AIRBUS

On 15th December AXON' CABLE was recognised by AIRBUS in Toulouse in the context of the AIRBUS 2009 AWARDS.

Every year AIRBUS recognises and promotes their 5 best suppliers of the year. AXON' has been selected in the category « best development and technological support » for the design and development of MIL-STD-1553 databus harnesses for AIRBUS 350 aircraft.

Databus networks allow the various electronic systems of a vehicle to communicate together.

AXON' designs and manufactures all components (cables, transformers, couplers, contacts and connectors) used in these data transmission networks. Their high reliability and excellent protection against electromagnetic interference guarantee overall signal integrity.

AXON' also has the expertise to simulate the topology of databus systems even before they are produced. The workshops are verified by the French National Space Studies Centre (CNES), and all harnesses are validated on automatic test benches.

Over the past 18 years AXON' has gained a wealth of experience in Milbus 1553 networks supplying across a range of programs including the helicopters Tiger, NH90, EH101, A129, A109, Eurofighter aircraft, A400M military aircraft, the Storm Shadow missile, and in Space, the ARIANE 5 launcher, EUROSTAR 3000 and SPACEBUS 400 satellites, as well as the automatic transfer vehicle ATV and the International Space Station ISS.

About AXON'

The AXON' group specialises in designing and manufacturing high tech conductors, electronic cables and interconnect solutions for markets such as aeronautics, space, medical, consumer electronics, telecommunications, computer, automotive, and military.

The company headquarters is situated in Montmirail, France (100 km east of Paris) and employs 1500 staff world-wide in 10 subsidiaries across Europe, America and Asia.

Axon's consolidated turnover amounts to 79 million € in 2009. 60 % of the sales are achieved through export.
